

# **INECTA FOOD ERP EXTENDED PROFILE**

## OVERVIEW

Inecta Food ERP is an industry-specific enterprise resource planning system for the food, beverage, seafood, and produce sectors.

It packages financials, supply chain, recipe and production control, traceability, warehouse operations, and logistics into a single, industry-tailored offering.

The product positions itself for SME and enterprise food processors, distributors, and manufacturers. It suits mid-market and enterprise food businesses best. Very small operations may find the scope larger than needed.

## TECHNOLOGY AND ECOSYSTEM

Inecta builds its food vertical solutions on [Microsoft Dynamics 365 Business Central](#). The product acts as an industry layer on top of Business Central and uses that platform for core financials, security, and user management. Inecta also has Microsoft Gold partner status and a direct cloud delivery model.

Because Inecta uses D365 BC as its core, licensing and some functionality follow Microsoft's user and module model. Organizations should include Business Central licensing in total cost calculations

## CORE CAPABILITIES

- Recipe and formulation management: Manage bill of materials, yields, and cost rollups for manufactured food products.
- Traceability and quality control: Bidirectional lot traceability, QC checkpoints, and documentation to support food safety and compliance.
- Inventory and warehouse management: Catch weight and batch-aware inventory, lot expiry tracking, and warehouse workflows.
- Transportation and distribution: Route and delivery planning, direct store delivery capabilities, and third-party logistics support.
- EDI and integrations: Integrated EDI options and connectors so businesses can exchange orders and invoices with customers and suppliers.
- Reporting and data tools: BI, ETL, and reporting options that extract and transform data for custom analytics.
